# 23 Library hooks

The library is loaded by a package option or inside the preamble by:

该库可通过包选项加载或在导言区内加载:

### \tcbuselibrary{hooks}

For the skin related options, the library skins has to be loaded separately.

对于与样式相关的选项,需要单独加载 g skins 库。

# 23.1 Concept of Hooks 钩子的概念

A hook is a placeholder in some LATEX code where additional code can be added. For example, the LATEX macro \AtBeginDocument adds code to a hook which is placed at the beginning of every document.

钩子是一些 LATEX 代码中的占位符,可以在其中添加额外的代码。例如,LATEX 宏\AtBeginDocument 向钩子添加代码,该钩子位于每个文档的开头。

Several option keys of tcolorbox allow providing some code which is added to specific places of a colored box. For example, /tcb/before upper P.?? places code before the content of the upper part. A following usage of this key overwrites any prior settings.

tcolorbox 的几个选项键允许提供一些代码,该代码添加到有色框的特定位置。例如,/tcb/before upper<sup>→P.??</sup> 在上半部分的内容之前放置代码。对此键的后续使用将覆盖任何先前的设置。

The library hooks extends /tcb/before upper P.?? and several more existing keys to "hookable" versions, e.g. /tcb/before upper app P.?? and /tcb/before upper pre P.??. The "hookable" keys don't overwrite prior settings but either append or prepend the newly given code to the existing code.

库 looks 扩展了 /tcb/before upper →P.?? 和其他几个现有键,将其扩展为可"挂钩"的版本,例如 /tcb/before upper app →P.?? 和 /tcb/before upper pre →P.??。这些"挂钩"键不会覆盖以前的设置,而是将新给定的代码附加或预置到现有代码中。

The general naming convention (with some small exceptions) is:

- 一般的命名约定(有一些小的例外)是:
  - 〈option key〉app: works like 〈option key〉but appends its code to the existing code.
     与〈option key〉相似,但将其代码附加到现有代码中。
  - ⟨option key⟩ pre: works like ⟨option key⟩ but prepends its code to the existing code. 与 ⟨option key⟩ 相似,但将其代码预置到现有代码中。

If the original  $\langle option \; key \rangle$  is used (again), all code will be overwritten. Therefore, the order of the option key usage is crucial.

如果再次使用原始的 (option key),则所有代码将被覆盖。因此,选项键使用的顺序至关重要。
